ABSTRACT

Different energy level healing techniques in Ancient Medical applications have reappeared with contemporary approaches in various forms such as the Brennan's Healing Science (BHS) and Jin Shin Jyutsu(JSJ). The current study explores the potential variations created in the energetic patterns of a group of physically and mentally challenged children after the application of a four-dimensional model of reality through the BHS modality. The study has been supported by the hypotheses that energy healings (biomagnetic induction) bring subtle shifts in the Human Energy Field (HEF). Gas Discharge Visualization (GDV) Pro technology has been used to verify the proposed hypotheses. The focus of this paper is to present the deep effects of BHS and JSJ on the auric fields of a group of children with disabilities. The study illustrates the profound shifts that BHS exposure taking the metaphysical level of children through an intensive experiential healing modality. The study was conducted on four children with disabilities. Through aura imaging techniques and high sense perception application, we demonstrated how subtle changes are achieved by manipulating the four dimensions of HEF. The BHS study was observed to bring greater coherency to the HEF. The current project seeks to show-healers, educators, parents, and medical professionals- the tangible benefits of healing through an ancient yet efficient modality.

Keywords: Energy Healing, biomagnetic induction, Brennan Healing, Jin Shin Jutsu, GVD, Ancient medicine

Introduction

Children with special healthcare needs include those who have or are at risk of having chronic physical, developmental, behavioral, or emotional conditions and who require specific health-related and/or additional services for a period longer than that required by children without disabilities. This definition includes but not limited to children with a broad range of conditions or chronic illnesses such as cerebral palsy, developmental delay, ADHD, depression, asthma, sickle cell anemia, or cystic fibrosis. It can also be applied to children who develop significant medical problems who are expected to last not more than a year according to the predictions of modern medical professionals. The report of the Special

Education Review Committee states: "those with disabilities and/or circumstances prevent that or hinder them from benefiting adequately from the education which is normally provided for pupils of the same age, or for whom the education which can generally be provided in the ordinary classroom is not sufficiently challenging" as its definition of pupils with special educational needs. This report describes particular categories of pupils with special educational needs, including pupils with mental handicaps, emotional and behavioral disorders, physical and sensory disabilities, specific learning disabilities, specific speech and language disorders, and autism [1].

The current paper elucidates the effects of the energy healings on children with special needs through a hands-on healing(biomagnetic induction) technique. The research results are supported by Aura imaging using Gas Discharge Visualization (GDV) that was invented by Dr. Konstantin Korotkoy [2]. GDV detects Energy Field Imaging(EFI) to document the condition of each case with pre and post healings. It also helped authors understand the benefits of the

Email: s.lakshmanan@vetha.org

GDV tool for health assessment more comprehensively. A typical procedure involves recording the child's state of health prior to and after receiving 10 healing sessions. The authors were further motivated to use a scientific measuring tool and discover exciting possibilities and renew hope for challenged children Worldwide. The motivation for this study came up during the authors' involvement in a special needs children's school with over 400 students at the "Sharjah City for Humanitarian Services" in the United Arab Emirates(UAE).

The research involves the gentle art of 'Jin Shin Jyutsu' being applied twice weekly for two hours, mostly on children with Cerebral Palsy. The research that was carried out over a three-year period, produced profound impact on children's health at the emotional and intellectual levels. It was noticed that the energy balancing with Jin Shin Jyutsu provided slow but steady results in the cases of children with severe disabilities. It was also observed that children were calming down and resting peacefully after each session. Some were promoted to higher classes, when they were observed to become more focused and creative. In this study, the authors further decided to integrate BHS with Jin Shin Jyutsu with the aim of bringing additional coherence in the energy fields of the children.

Materials and Methods

Four children were considered for the study: boys between the ages of six and sixteen. The first criterion for selection was for the study to represent four different special needs. The next criterion was to ensure that the selected children were physically able to place the fingers of both hands on to the sensors of the GDV Pro.

Case 1 – A: Cerebral Palsy (11 years)

Case 2 – M: Down Syndrome (10 years)

Case 3 – N: Autism (16 years) and

Case 4 – Z: Speech Difficulty and Developmental Delay (6 years)

The first step involved acquiring aura images of each child by using a GDV Pro camera before the healing procedure. Second, 10 healing sessions with each child (lasting about 20 to 35 minutes per session) were carried out over a period of 6 months. Aura images of each child were taken again with the same GDV Pro. Finally, the two sets of aura images were compared and the difference in the energy field, their implications, and tangible benefits were studied and analyzed.

Description of children prior to receiving healing sessions

Case 1 – A: Cerebral Palsy

11-Year-old boy who is wheelchair bound, speaks only a few words, physically over-weight and refuses to cooperate in physiotherapy. He has problems with head extensor muscles and weakness in the whole frontal neck and abdominal muscles, with tightness in the hamstring and the calf muscles. He understands a few words and rolls his tongue towards the

roof of the mouth. A very friendly and happy child, he enjoys healing sessions.

Pendulum: Pendulum readings suggest the 5th and 6th front and back, and 2nd and 3rd in the back, and the 7th energy centers spin horizontally, indicating control of the energy flow and a strong energetic block; other energy centers are open and harmonious.

GDV Pro: GDV pro images show that A's 6th energy center is weak. Besides that, the other energy centers are functioning well. The head zone, urogenital area, the left side of the body, and the heart zones are depleted.

Case 2 – M: Down Syndrome

10-Year-old boy who is hyperactive on a physical level, and speaks very little. He frequently suffers from colds with thick mucus and there are red colored rashes on his face. His lumbar area was pushed back. A thick nail-like substance was detected on the left side of the brain.

Pendulum: The pendulum energy centers readings suggest all the centers are spinning horizontally, holding down the energy flow and feelings.

GDV Pro: GDV pro images show that his heart center was open. 2nd and 6th energy centers were exactly on the ideal range, whilst the graph showed a low 1st, 3rd, 5th, and 7th energy centers. The head zone, heart area, and the left side of the body seemed depleted.

Case 3 – N: Autism

16-year-old boy who speaks very little and is very sensitive and quiet. Unable to sleep well, his upper back is pushed outwards. This affects the vertical power current and the Hara line. His rib cage is sunken, affecting the mental body. His pulse was fast in his ear and lung indicating that both organs' energies are over-worked. In level 1 of his field, the lines of light are torn around the rib cage and the rib cage is pulled inwards. His fourth level is beautiful and clear.

Pendulum: According to the pendulum readings, all the front and back energy centers are spinning horizontally, holding energy flow and feelings down.

GDV Pro: GDV pro images show most of the energy centers are below the ideal range. Head zone energy is low.

Case 4 – Z: Speech Difficulties

6-year-old boy. He is overweight and his parents support his therapy by giving him regular Jin Shin Jyutsu sessions.

Pendulum: According to pendulum readings, the 2nd, 3rd, 4th, 5th, and 6th front energy centers are open and harmonious. The 1st and 2nd back energy centers and the 5th front energy center are spinning horizontally, holding energy flow and feelings down. The 7th energy center is vertically moving feelings and energy toward the spiritual dimension to avoid personal interaction.

GDV Pro: GDV pro images show that the pineal gland area and right side of the body is more depleted; the 3rd and 5th energy centers are weak; and the head zone, heart area, colon area and

blood circulation area are depleted.

Discription of Healing Modalities and Tools Used

Jin Shin Jyutsu®: Physio-philosophy is an ancient art of harmonizing the life energy in the body. It was born of innate wisdom and passed down from generation to generation by oral tradition. This traditional knowledge was revived in the early 1900's by Master Jiro Murai in Japan when it had fallen into relative obscurity and later, it was further developed by Mary Burmeister who brought the technique with ther to the United States in the 1950s. Jin Shin Jyutsu is based on using palms and hands to stimulate and balance the flow of electromagnetic energy in the body. It is a healing modality traditionally known for releasing tension, which is the root cause for various other symptoms that appears in the body. Our bodies contain several energy pathways that feed life into all of our cells. When one or more of these paths get blocked [Figure No.1], this may lead to discomfort or even pain. This blockage or stagnation will not only disrupt the local area, but will eventually disharmonize paths of the energy flow. Jin Shin Jyutsu uses 26 “safety energy locks” along the energy pathways that feed life into our bodies. When one or more of the paths gets blocked, the resulting stagnation can disrupt the local area and can lead to critical problems. Holding these energy locks simultaneously can balance the mind, body and spirit [3].

BHS - Brennan Healing Science is a highly specialized,

complementary healthcare modality. It consists of an assessment of the client's energy consciousness system and specific hands on techniques that affect the energy-consciousness system. This technique can clean-up/strengthen/balance/repair/structure the energy consciousness system. Restructuring involves rebuilding the specific pattern of the field in the area that's been injured or diseased. BHS can be utilized as part of an integrated plan of care for individuals with acute or chronic disease or injuries as well as psychological trauma/disease [4].

GDV Pro - captures the physical, emotional, mental, and spiritual energy emanating to and from an individual. Electrophotonic GDV images contain comprehensive information about the human state at the moment of recording, and can be used to monitor human responses to treatments. The GDV technique enables quantifying the response of any person to any treatment. The authors felt that both modalities could be combined to complement each other as both the systems work based on the HEF. In BHS, there are four dimensions: Physical, Auric, Haric, and Core Star. In Jin Shin Jyutsu (JSJ), there are 6 depths, 12 organ functions, and 26 safety energy locks to work with. In BHS at the auric level, the 1st, 3rd and 5th levels of the energy field are used for restructuring the field and the 2nd and 4th levels are used to remove the clouds and mucous from the emotional and astral level. BHS also provides over 50 healing skills to work with the individual needs of the client.

JSJ has specific organ and safety energy lock flows for mental and emotional issues, for vitality, for critical needs, and for reproductive and regenerative needs. The simple philosophy of JSJ is that when life energy moves through the body without obstruction, one is declared to be healthy by definition. The obstructions are hypothesized to be created by five mental attitudes, namely worry, fear, anger, sadness and pretense. This is in analogy to the five fears: fear of annihilation, incompetence, control, invasion and imperfections, and five characteristic wounds: such as, Schizoid, Oral, Psychopathic, Masochistic and Rigid [5]. In BHS, the broken lines of light are restructured. Similar to BHS, JSJ is dealt by placing hands on two specific places bringing the pulses into balance.

While working with the children, the researchers experienced that using JSJ in conjunction with holding the BHS states of being has been very effective for healing, especially while placing the hands on two specific points of JSJ and holding the 1st and 5th level of the fields or while doing the 5th level Psychic surgery, and connecting to the consciousness at the mental plane. Research analysis on the children has produced remarkable results that is discussed in this paper. *Cellular Awareness* in BHS is similar to balancing the pulse in Jin Shin Jyutsu. Pulse is the vibration of life that can be found in our bodies and in the cosmos. Pulsation exists in everything. Cellular awareness is a doorway to accessing the life force that exists in all of us. When we tap into this level of conscious awareness, we enter the process of evolution on both the

Locations of 26 “Safety” Energy Locks on Universal Harmonizing Energy Circulation Pattern

Figure 1: Points 1-6 indicating Safety energy locks at the energy level body

personal and universal levels [6].

In terms of Yoga it called as the 'Nad' and through special practices, individuals are trained to detect sound inaccessible to ordinary hearing and feeling. Sitting with the children, in the study and transcending the working mind to be the observing mind, and then connecting deeply to the inner pulse and from there, deep healing can take place.

States of Being is a BHS skill to hold 2 or 3 levels of energy-consciousness system simultaneously to create states of consciousness such as Divine Love, Divine Will and Divine Truth [7].

Jin Shin Jyustu Methodology

In JSJ method, body and pulse readings are monitored through observations, where it can be understood whether the patient's energy is stagnated, weakened, or over-worked. There are specific flows for cerebral palsy, autism, down syndrome, speech and learning difficulties. Life energy moves through the body in distinct pathways known as patterned flows. When the life energy moves through the body without any obstruction, we are in perfect harmony according to JSJ. Blockage of life energy is said to be the root cause of all critical labels. Freeing up the stagnant energy can help any chronic complaints.

During sessions, notes are provided on specific areas on the body to work with at home. When parents worked with hands-on-healing on a regular basis to support their children's healing, there was a significant difference in skin rashes and cold attacks. Here is a possible mechanism for how JSJ works. As explained earlier, there are 26 distinct sites on the right and left side of the body – that are termed as *safety energy locks* -. These locks act as circuit breakers to protect the body when the flow of life energy is blocked. Once a safety energy lock shuts down, it manifests a symptom in the corresponding part of the body. When we have extreme emotions of worry, sadness, grief, anger, fear, or control, holding the thumb, ring finger, middle finger, index finger and the little finger balances the emotions. Each finger and thumb simply unlocks the corresponding keys to harmonize attitudes. Secondly, there are specific locations on the physical body that, when held with a pressure, helps speech, increases immunity (does the work of antibiotics), deals

with skin rashes to name a few. We use our two hands to energize our body (similar to a jumper cable). According to the oriental medicine and ancient literature, all of the key points of the human body can be accessed from the fingers and palms. Holding the fingers helps unclog micro-energy pathways and improve blood circulation to strengthen the immune system, allowing the body to more combat disease. There are simple flows, also known as 'self-help' flows, which can be applied universally. As an example, there is something called the Main Central Flow – which is the source of energy for body's functions [8].

Brain-Balancing – This is a BHS skill where the right and left hemisphere of the patient's brain [9] can be balanced and synchronized. Most of the aura images demonstrate that the brain areas of these children were depleted of energy. Since the brain's limbic system is the place where emotions, learning and memory takes place, brain balancing can greatly support children with special needs.

Discription of Children Behavior and Response During Healing Sessions

Case 1 – A: The session is started with a few minutes of Chelation. According to this treatment, cerebral palsy is hypothetically connected to the heart function energy, therefore heart flow passed through the hands was given. A showed high sensitivity to applied energy. His body heated up very quickly and requested the healer to remove hands instantaneously. Clearing occurred on the right side of the abdomen after the brain balancing and the structuring of lines of light. His tongue is fully opened and no longer rolling backwards. During the sessions with the children, it was observed that their toleration levels ranged from 20 to 30 minutes. In this case, the patient tolerated treatment for up to 30 minutes. The patient's right side of the body was imbalanced and the right knee and neck area seemed to be receiving energy flux from the healings. The patient showed emotionally happy to be touched, clearly showing that his

character is related to the 1st depth as per JSJ and there is some disharmony noticed with his stomach and spleen. These healings seem to have reduced some of his weight-The child's stomach function was monitored and given treatments to reduce weight on his cord connection on 1st, 5th and 6th was observed and analyzed. The possible hypothesis is that the

right hip is connected with speech. His soul's task is Divine surrender and trust. He loves these sessions and whenever he sees me, he asks me to hold his hands and says 'AVVA' which means 'It hurts', thus urging me to hold that place.

Case 2 – M: In Jin Shin Jyutsu, skin rashes builds from the 1st (stomach and spleen) and 2nd (lung and large intestine) depth. M had red colored rashes and was prone to colds with thick and

Restructuring Organs	-	-	-	Yes
Brain Balancing	Yes	Yes	Yes	Yes

greenish mucous. He tolerated up to 20 minutes in a session. The right side of the lower abdomen was very tight. He was focused on himself to clear up his mucous and to structure the energy centers and levels of the field. The child preferred to have sessions sitting down, as he felt restless when lying down. It took some time for the researcher to develop contact with him. His mother was also trained to focus some specific points behind the knees to get relief from the skin rashes. By the fifth session, his face became very clear and the red rashes were reduced by up to 90%; the lungs also cleared up – becoming calmer and relaxed. Once the healings stopped, the rashes wear reappeared and lungs regressed to the initial blocked state.

Case 3 – N: In both Case N and Z (case 4), the parents were well-educated and this is reflected in their patience with their children. They monitor the child's wellbeing and moods and nurture them in a gentle way. N's mother is a dentist and she is very interested in learning some self-help tools and using it for her son on a regular basis. He is a very quiet child and (for the most part) is happy to lie down and receive the sessions. There was a great contact with this child as a healer, good bonding and mutual unconditional love. His eyes exuded a divine spark. He loved to place his hands on the healers head during healings and, during the first meeting with him for aura images, he kissed the healer. He enjoys the first 35 minutes of the healing, laughing merrily halfway through, full of joy. Tension was felt on his hip area when hands were laid on him. Usually the process is started with a Chelation and then move on to either Jin Shin Jyutsu or a BHS skill. The child also sang during the healing but towards the end, quieted down and the healer sensed some anger in the 4th level.

After the child had a few sessions, his mother said he was communicating with her more actively and was sleeping better too. A great deal of energy went towards the hip area during healings. In some sessions, his hip, spine, and kidney areas were sent some doses and heard that his digestion had improved. He has since become creative, writing his own songs and singing them aloud and also smiles a lot. The top part his right portion of the brain was felt weaker, so doses where applied on that as well as the brain stem area. There was golden color energy around that area radiating divinity, enhanced by his constant smiles. The child loved holding the healers hands and during 7th level uplift, literally seemed uplifted, displaying great joy. During the 9th session, he appeared very angry in the beginning which miraculously transformed into a joyful peace eventually.

Case 4 – Z: Initially he was very shy, unwilling to let go of his father's hand. During the first healing, a stagnation was perceived in the 3rd energy center and the lower abdomen and mucous on 2nd and 4th levels. There were lots of cord attachments from the father. He was continuously murmuring and was restless. Started with Chelation and brain balancing followed by clearance of the mucous on the 2nd and 4th levels of the fields. In the second session, the child's father was requested to sit further away while the healer held a core star and, with harmonic induction, connected to Z's core essence.

The child was quite fascinated by the work of clearing his field, and soon started imitating the healer, clearing up his body with his little hands. The healer felt lots of unconditional love flowing. In the third session, his heart felt a deep bonding with the patient-he started trusting the healer more. The healer worked on what was perceived as patients and his father's tangled 2nd chakra cords.

From his father's side, there was a connection with self-love and acceptance and from that place, accepting Z as he is in his essence. Around the fourth session, the healer noticed the child's bed-wetting problem, not present earlier. Earlier Z's parents had been working regularly on the child with JSJ; however, there had been a break when his father went through a busy period. The healer could feel Z's fears most prominently and worked on his limbic system, doing some structural work on the kidney and urethra. After the fifth session there were aftereffects – he had nose bleeding on two occasions and then vomited just water. He appeared irritated and refused food. Since his father is also a JSJ practitioner, the healer was able to communicate with him clearly about the JSJ method, that when the blood stagnates in muscles along spine, it results in nosebleeds. The healer worked on his spine and lung area. Between the sixth and seventh sessions, his bed wetting decreased in frequency. After the last session, he had a fever and felt weak. However, his bed-wetting has been reduced.

Results and Discussion

Four cases were that were considered for our research:

Case 1 – A [Figures 2(a-e)] has lost some weight. Patient is very happy with the sessions. He tries to move to some extent. He is receiving regular physiotherapy and his neck is more flexible. There was a considerable shift in the size of energy centers and except the 5A and 4B, all the energy centers are able to receive harmonious energy from the Universal energy field. He is able to move and get up and sit on his wheel chair – which he was not able to do before.

GDV *pro images* of AR show relevant differences. The bio field of AR is bigger- corresponding with a growth of "psychic stability". A's chakras demonstrated considerable changes - total shift to emotional space. The right side of his body shows more transformation in the post-healing image.

Case 2 – M [Figures 3(a-f)] is more willing to attend and participate in the sessions. His lung congestion is improving. His immune system is much stronger. His skin is much clearer. He is helping the other children in the class by pushing their wheel chairs and he is much more relaxed and happy. He is looking forward to his sessions. When healings procedure was stopped it was noticed that his skin rashes reappeared and the congestion in his lungs worsened. All his energy centers were taking harmonious energy except 6A, 4B and 5B

GDV *pro images* show the alignment of all chakras except 3 and they show some development. As this needs to be understood that, they are within the area of normal variations.

Pre and post-healing Energy centers measurements: Case 2 M

Case 3 – N [Figures 4(a-f)] With autism, he started singing on the healing table. His parents shared that before the healings, he used to be a recluse and now he is communicating his needs and is more present in his physical body and surroundings. He is making salads at home. They are planning to get him a job in a supermarket where he can be a helper. After the ten sessions, significant changes occurred in the energy centers. His 1st, 2B, 3B, 5B, 6th and 7th front and back energy centers are taking harmonious energy from the universe. Compared to the previous energy centers readings, there is improvement.

GDV *pro images* of N show that there is some shift in the emotional sphere in the post healings.

Case 4 – Z [Figures 5(a-c)] who was feeling restless before, now lies down quietly and enjoys the sessions. His father shared that he is trying to imitate his 2-year-old brother by repeating lots of words. His father and mother also worked with him on a regular basis with Jin Shin Jyutsu. His fears are reduced. Bedwetting that had started in between was reduced by the end of the 10 sessions. He won a merit award for his social skills at his school. His speech is better. His ability to mix with people improved. Except for the 1st, 5B, 3B energy centers, the rest of the front and back energy centers are taking harmonious energy from the universe.

GDV *pro images* of Z show lots of shift in the heart, liver, colon, urogenital and throat area.

Conclusion

Ancient Healing techniques using biomagnetic inductions have significant health benefits. In dealing with chronic cases it was observed in the current study that the children need support at all levels. It has to be an ongoing process and they deserve the best. Children are special, and no label can define or limit their potential for positive changes. Regular hands-on healings can be one of the major steps in this direction. Besides regular hands-on healing, regular physiotherapy and speech therapy also can be included for better results. Taking integrated approaches (both Ancient and Modern) such as using complementary therapists, psychologists, nutritionists, physiotherapists, and speech therapists, the children are ensured to be supported multifold ways. The combination of a support system, regular meetings with parents, emphasizing the benefits of healthy eating and interacting, besides simple self-help techniques (which instills self-responsibility) is important for the holistic growth of children. There are simple hand gestures that can be utilized for balancing the brain, concentration, and focus. There is a strong connection between quality of food intake and the acquisition of diseases. The authors are unable to bring that part of the study here where we discuss the relationship between the disease and the connection with food from different depths of energy field in detail, but it is very important to educate parents on this, for it has potential for major transformation in children's health. A report on the effect of food on children's health will be published separately. Also, a separate report on the effect of Biomagnetic Induction for Chakra Attunement for Energy Enhancement and Healing(BICAEHH) will be published as part-2 of this paper.

Also, we note here that when we interacted with scientists who have expertise in GDV *pro* – one of the scientists shared that “GDV system has got certain strengths and weaknesses. An unbiased evaluation is very important. My study may be another step in that direction.” The authors believe that a most accurate set of data would be possible if parameters such as temperature, humidity and atmospheric and pressure were considered during the

study, given that GDV system is particularly sensitive to humidity and temperature variations.

Acknowledgement

Dr. Konstantin Korotkov was kind enough to support our project in terms of the paper in many aspects. We are thankful for him to allowing us to use his software for this project and his enthusiasm about the project itself as there have been very few projects involving GDV Pro with special needs children. He was congruent with us about the opinions that special needs children are important; these are indications of quality of life; and that it is unfair to expect strong shifts in a short time, especially with these cases. We thank the Vetha Center for Transdisciplinary Studies in the USA for the support.
